# **See Your Data Come to Life with Sisense Pulse**

---

**How do I find insights without having to dig through lots of dashboards & data?**

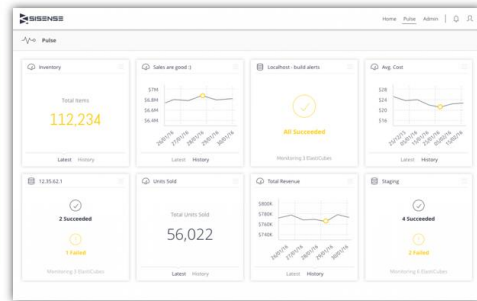

**How do I stay on top of major business events in the easiest way?**

**How do I deliver tactical information for my end users, in an automated, scalable fashion?**

**How do I deliver information that's personalized to each of my unique end-users?**

# Sisense Pulse

## System Alerts

### Build

- Failed
- Succeeded
- Succeeded after failure

## Data Alerts

### KPIs

- Indicator widgets only
- Include applicable filters

Plan alerts as part of your dashboard planning

### Alert Conditions

- Threshold
- Automatic (Anomaly detection)
- Always

### History

- Latest Vs. History

## Notifications

### Share Alerts

Administrators and Designers can notify additional Sisense users and groups

### Channels

Notifications can be sent to email, Sisense mobile and other apps  
Notifications (Events) can trigger smart workflows in other applications

Viewers cannot share alerts with additional users

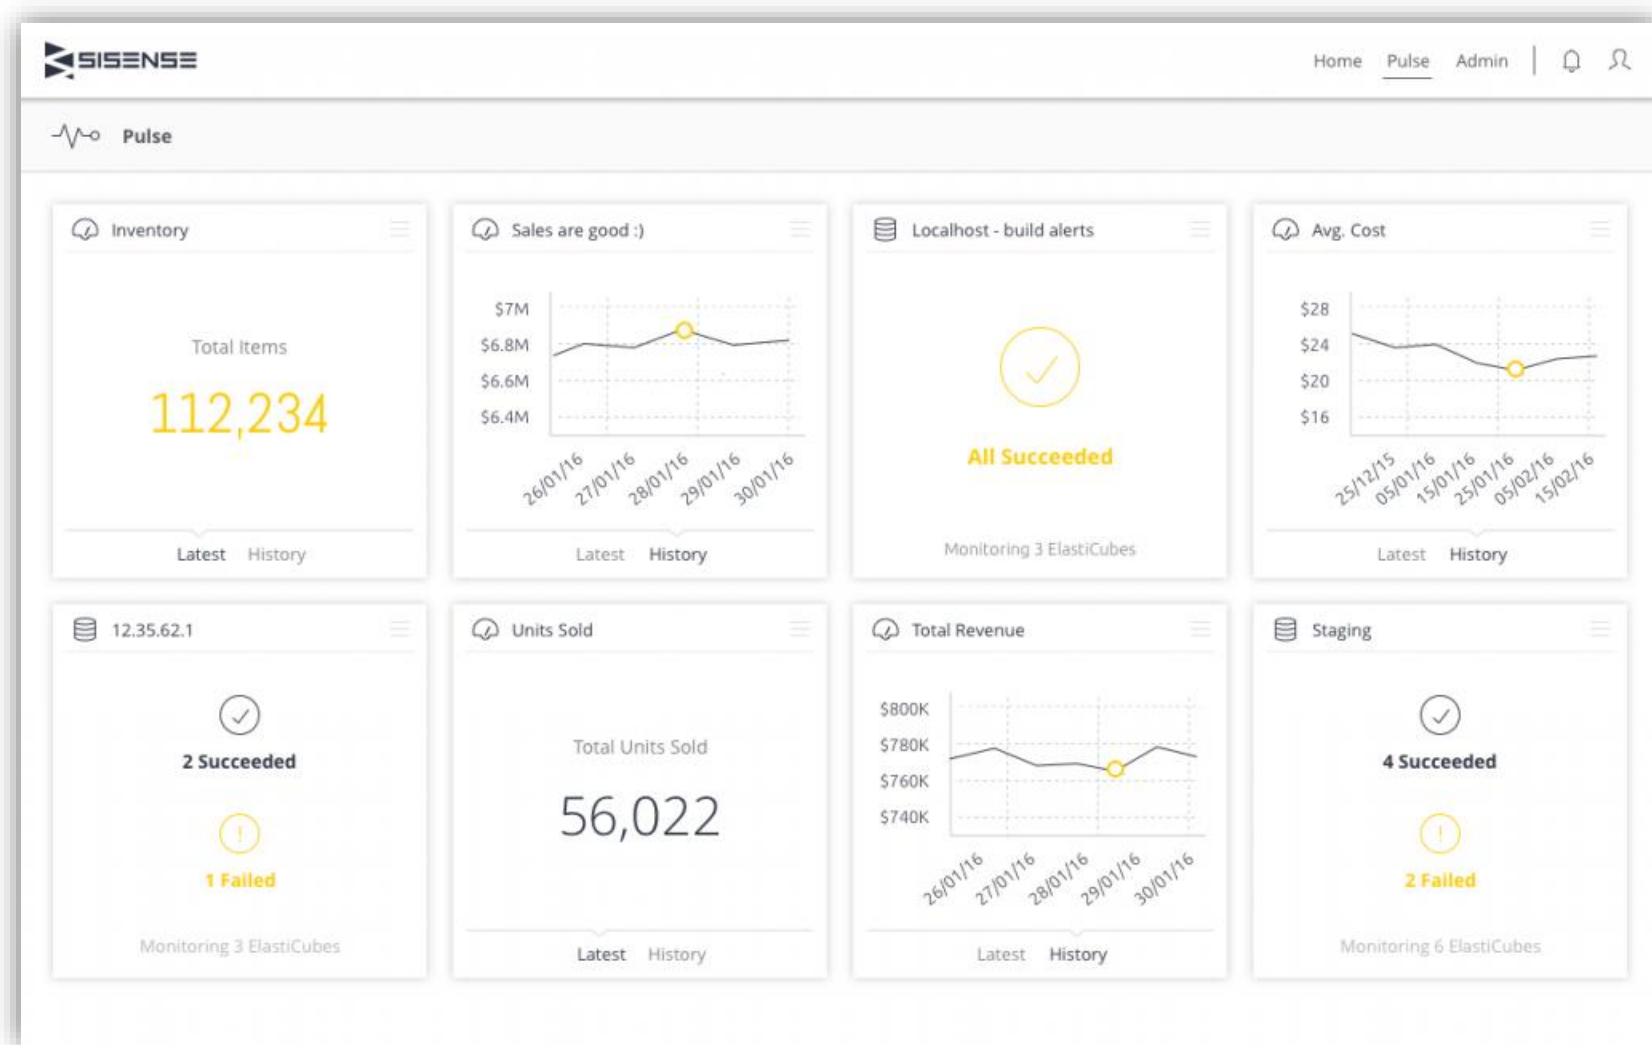

### Alerts Behavior

Don't let the alerts keep you up at night: limit the amount of notification sent

### Webhooks

Use webhooks to customize your notifications channels

# Sisense Pulse

# Sisense Pulse

## **Smart**

Proactively detects when important changes happen in your most critical KPIs (or administrative events)

## **Easy to consume**

Pulse Page for centralized monitoring & Feed for streaming updates

## **Personalized & Sharable**

Shared by teams, or personalized for every user, by the end users (viewers)

## **Scalable**

Pulse events may trigger events and automatic workflows in other business apps
